11-Plus Non-Verbal Reasoning Quiz Similar Shapes

EducationQuizzes

In each question that follows, the two shapes on the left have one or more features which make them similar to each other. You must find the figure on the right which is most similar to the ones on the left. Similarities might be based on shading, outlines or the number of shapes in a figure. It might be based on the rotation or reflection of the shapes in a figure, or on any combination of all the above features. Just because an answer from A, B, C or D has one feature in common with 1 and 2 does not necessarily make it the most similar. Watch out for tricky answers.

An example has been done for you.

Example

Which one of the figures in the boxes on the right is most similar to the ones on the left?

The correct answer is C.

Boxes 1 and 2 have 2 four-sided shapes and one circle. This would lead us to B, C or D, but Figures 1 and 2 also have only one grey shape so we must be looking for C.
